

Aristotle on Why Some Friendships Are Evil

Good friendships seem worth celebrating. But for many of us, tensions can appear from time to time between being a good friend and doing “the right thing.” When faced with, for example, a situation where it’s tempting to lie to cover for a friend, it can seem as though friendship and morality are on a collision course.

I am an [ethicist who works on issues involving friendship](#), so this tension is of great interest to me.

It can be tempting to say that bad people are likely to treat their friends badly: For example, they could lie, cheat or steal from their friends. But it seems logically possible for a person to be bad to some people but good to others.

So are there other, more fundamental reasons to think being a good person is necessary for a good friendship?

Problems for friendship and morality

Let’s begin by looking at cases where morality and the demands of friendship are in conflict.

Friendship seems to require that we be open to our friends’ ways of seeing things, even when they differ from our own. It also seems to require that we be concerned for our friends’ well-being. It’s not just that we desire good things for them. We also want to be involved ourselves in providing at least some of those goods.

This is one thing that distinguishes the care of friends from that of mere well-wishers.

But we also need to remain open to our friends' beliefs about what is good for them: Blithely acting on what we think is best for our friends, when the friend disagrees, seems paternalistic. In some circumstances, like hiding a friend's keys when he's been drinking, a little paternalism might be permitted. But it seems a poor general feature of friendship.

Some theorists argue that it is this openness to friends' perspectives that introduces moral danger. For example, friendship with a person who has different values [can gradually change your own](#), including for the worse. This is especially true when the relationship makes you inclined to take their point of view seriously.

Other scholars argue that it is the combination of the desire to help friends with this openness to their point of view that [poses the biggest problem](#). In making this argument, scholars [Dean Cocking](#) and [Jeanette Kennett quote a line](#) from Jane Austen's "Pride and Prejudice." In this line, the protagonist Elizabeth Bennett tells the cold and inflexible Mr. Darcy that "A regard for the requester would often make one yield readily to a request, without waiting for arguments to reason one into it."

In other words, if your friend asks you to tell the boss she's sick, not hung over, you should do it, just because she asked.

Aristotle on virtue in friendship

In order to respond to these concerns, it is helpful to review what Aristotle says about friendship and being a good person.

For Aristotle, there are [three main kinds of friendships](#). One, friendships of utility: as, for example, between friendly co-workers. Two, friendships of pleasure: for example, between members of a trivia team. And, three, friendships among those who find each other good and valuable for their own sakes.

This last one he calls friendships of virtue, the [best and fullest form](#) of friendship.

It seems reasonably clear then why valuing someone for their virtues is characteristic of good friendship. Unlike the other forms of friendship, it involves valuing friends for themselves, not just for what they can do for you. Furthermore, it involves thinking their character and values have worth.

Some might worry that this sets the standard too high: Requiring that good friends be perfectly good would make good friendship impossibly rare. But Aristotelian scholar [John Cooper](#) argues that we can just take this to mean that the quality of a friendship [varies with the quality of the friends' characters](#).

Mediocre people will tend to have mediocre friendships, while better people will have better friendships, all else being equal.

What is virtue?

This might all seem hopelessly subjective, if we leave “good person” undefined, or think it is relative to a person’s individual values. But Aristotle also offers an [objective account of what it takes to be a good person](#).

A good person, he says, is someone who possesses the virtues. Virtues, like courage, justice and moderation, are individual qualities of character that help us live good human lives, alone and together.

Aristotle argues that just as sharpness is a quality that helps a good knife perform its function well, we function better as human beings when we can protect what we value, work well with others and enjoy pleasures in moderation.

He defines bad qualities, or vices, as those qualities that

make it harder to live a good life. For example, cowards have trouble protecting what matters, gluttons don't know when to stop consuming and unjust people exhibit what he calls "graspingness," grabbing for more than their share. So, they have trouble working well with others, which can be a major impediment for a social species.

Lastly, and crucially, he says that we build up these qualities, both good and bad, through repeated practice: We become good by repeatedly doing good, and bad by the reverse.

Connecting Virtue and Friendship

How then can this help us understand the relationship between being a good person and being a good friend?

I have already said that friendship involves both openness to friends' perspectives and helping them out. Assuming Aristotle is right about the relationship between good character and ability to live well, it is not good to enable a friend who acts badly, because doing so will make it harder for that friend to live a good life.

But friendship is also not served by riding roughshod over the friend's own beliefs about what he or she needs, even if those beliefs are mistaken. So the only people we can consistently do well by as friends are those who have reasonably good character.

We can, of course, change our own values and reactions to better match our friends. Much of this can happen unconsciously, and some such change might even be healthy. But when this change is for the worse (for example, becoming cowardly or unjust), we seem to be harmed by the association.

If time spent with my lazy friend tends to make me less motivated when it comes to my own life, I arguably am worse off. This can make such friends bad to us, even if unintentionally.

Really good friendship, it turns out, isn't even possible unless both friends are reasonably good.

The apparent tension between friendship and morality turns out to be just an illusion that results from failing to think carefully and clearly about the relationship between openness to our friends' perspectives and our interest in helping our friends.

As [Aristotle put it](#),

The friendship of bad men turns out an evil thing (for because of their instability they unite in bad pursuits, and besides they become evil by becoming like each other), while the friendship of good men is good, being augmented by their companionship; and they are thought to become better too by their activities and by improving each other; for from each other they take the mould of the characteristics they approve.
